

# bi-metal thermometers

## all stainless steel construction

### TB8 - DS 100-125-150

**06.TB8**

These instruments are designed for use in food, beverage, pharmaceutical, chemical, petrolchemical processing industries. They are built to resist the most severe operating conditions created by the ambient environment and the process medium. An TIG welded case/bulb strengthens the whole construction. A leak tight fit is ensured if the instrument is filled with a dampening fluid to prevent damage due to vibration.

#### Functional and constructive

##### 06.TB8 all stainless steel construction

**Measuring range:** the C° measuring range has been marked by two "▼" stamped on the dial. They represent the temperature span recommended for the use of instruments as per DIN 16203.

**Accuracy:** class 1,0 as per DIN 16203.

**Ambient temperature:** -25...+65 °C.

**Working temperature:** continuous from -50 °C to +450 °C; intermittent only between 450 °C to 500°C.

**Overtemperature limit:** 30% of full scale range for temperature ≤400 °C; max 500 °C.

**Special overtemperature (option F02):** 100% of full scale range for temperature ≤150 °C; 50% of full scale range for temperature tra 150 °C e 300 °C; max. 500 °C.

**Max working pressure:** 15 bar (without thermowell).

**Protection degree:** IP 55 as per IEC 529.

**Process connection:** AISI 316 st.st.

**Bulb:** ø 6-6,4-8-9,6 mm. AISI 316 st. st.

**Measuring element:** bi-metal spiral shaped.

**Welding:** AISI 304 st.st. TIG.

**Case:** AISI 304 st.st.

**Ring:** AISI 304 st.st. bayonet lock.

**Window:** glass.

**Dial:** aluminium white with black markings.

**Pointer:** black anodized aluminium.

**Zero-Adjustement:** external zero-adjustment screw.

**Gasket:** EPDM.

#### Special version

**Measuring range:** °F, and double range °C/°F .

**Protection degree:** IP 65 (option E65).

**Case and ring:** AISI 316 st.st. (option C40).

**Dampening liquid filling:** glycerine 98%, silicon oil and Fluorolube (options R10-R11-R12; see table on page 4 for limit operating conditions).

#### MEASURING

The bi-metal thermometers are built from a stainless steel tube inside of which a bi-metal helicoidal spiral is placed.

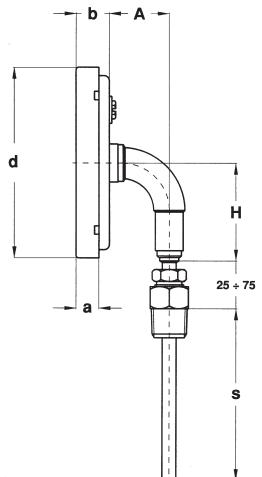

This spiral is welded to the tip of the tube and on the other side to a transmission shaft directly connected to the pointer.

The temperature vibrations create a deformation of the bi-metal which is transmitted to the pointer through a shaft rotation.

**FILLING LIQUIDS**

Filling liquids	Ambient temp.	Working temp.
Glycerine 98%	+15...+65 °C (+60...+150 °F)	+15...+160 °C (-60...+320 °F)
Siliconic oil	-45...+65 °C (-50...+150 °F)	-40...+250 °C (-40...+480 °F)
Fluorolube	-60...+65 °C (-76...+150 °F)	-50...+200 °C (-58...+390 °F)

Glycerine and siliconic oil must not be used with strongly oxidant agents such as oxygen, chlorine, nitric acid and hydrogen peroxide. It could be dangerous because of spontaneous chemical reactions, inflammability or explosion. In these cases the use of fluorolube is recommended.

**THERMOWELLS**

Must be used on all applications where thermometer bulb is subjected to pressure, corrosive fluid or flow rate. Thermowells will make thermometer disassemble for calibration or replacement easier as the process will not be disturbed.

**Thermowells available:**

- thermowells with thread connection either built up type or machined from bar stock;
- thermowells with flange either built up type or machined from a bar stock;
- thermowells to be welded machined from a bar stock.
